Linking to E-books from specific e-book databases and e-book chapters.

The most comprehensive way to search for e-books is to use individual e-book databases. GPC Libraries has the following e-book databases:

- eBooks on EBSCOhost
- Academic eBooks on EBSCOhost
- Gale Virtual Reference Library
- ABC-CLIO
- Salem Press

1. Go to GALILEO and select Databases A-Z.

2. Use the Find Databases options to go to the database of your choice.
3. Use the search options to locate an e-book of your choosing. You may also choose to go to a specific chapter or page in the e-book. (This example shows a search in Gale Virtual Reference Library for books with “Algebra” in the title.) Click the title to go to the e-book or chapter. If desired, navigate within the e-book to the portion you want.

![Image of Gale Virtual Reference Library search results]

Part 2: Get the permalink for your e-book, chapter, or page. In this part, the instructions vary by e-book database.

FOR GALE VIRTUAL REFERENCE LIBRARY:
1. Click “Share”

![Image of sharing options in Gale Virtual Reference Library]
2. From the resulting pop-up box, **copy the Bookmark URL**. You will need to add a proxy link prefix to this URL after you paste it in iCollege. See **PART 3**.

For EBSCOhost e-books
1. Click on the **Permalink** icon. If you are on the cover of the book, it will link to the book cover. If you are on another page of the book, it will link to that page.

2. **Highlight and copy the permalink** (right click to get a drop down menu or Ctrl + C). You may now paste this link where you want to link to the ebook or page. You do not need to add a proxy prefix.
Part 3: Paste the URL

If you are using an EBSCOhost e-book, you may paste the permalink as is. When they click the resulting link, users will be prompted to enter the GALILEO password to access the e-book.

If you are using an e-book from Gale, Salem, or ABC-Clio, you will need to add a proxy URL prefix to the permalink you have copied. This proxy URL prefix will direct users to enter their GPC Username and password so they can access the item within the database.

To add a proxy prefix, follow these instructions:

1. Paste the permalink where desired.
2. Use the mouse or arrow keys to move your cursor to beginning of the link.
3. Type or copy-and-paste the following text in front of the link (no spaces)

http://ezproxy.gpc.edu/login?url=

For example:

http://ezproxy.gpc.edu/login?url=http://go.galegroup.com/ps/i.do?id=GALE%7CCX3012400010&v=2.1&u=clar34424&it=r&p=GVRL&sw=w&asid=92eb541573e948bc6ac485fb32e3a6a

Now your link should be ready to use!
